RETAIL DEMAND & INVENTORY INTELLIGENCE

Smarter Demand. Better Inventory Decisions.

A data-driven view of retail demand, model performance, product trends and inventory risk.

Displaying 30,490 product-store combinations across 10 stores.

High-Risk Products

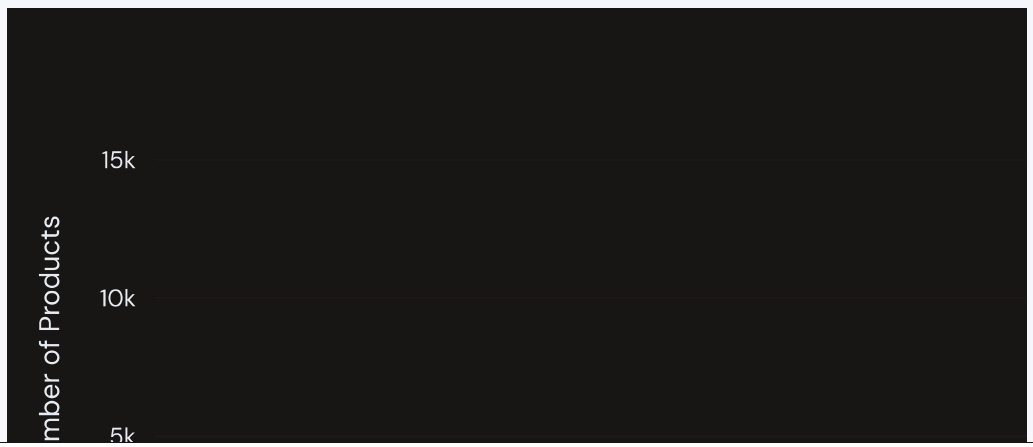

Prioritize products with elevated project-defined inventory risk scores for further investigation.

Risk Score Interpretation

The risk score is a project-defined prioritization measure combining forecast error ranking and safety-stock ranking. It is not a statistically calibrated probability of stockout or product failure. Higher scores indicate products that may deserve closer review.
